04 — Insights & Recommendations

A data-driven summary of consumer behavior observed in the dashboard, translated into practical Bellabeat marketing opportunities.

Executive Snapshot

24 Total users	**8,259.99** Average daily steps	**252.44 min** Average active minutes	**419.57 min** Average sleep duration
59.12 days Average days recorded	**61 days** Median days recorded	**94.04%** Highly engaged	**332.3** Average steps/hour

Key Findings

1. Consumers show strong overall engagement.

The dataset contains 24 users with an average of 59.12 recorded days and a median of 61 days. The dashboard reports 94.04% as highly engaged, indicating that sustained use is a major strength of the observed consumer group.

2. Activity levels are meaningful but not consistently high across all users.

Average daily steps are 8,259.99 and average active time is 252.44 minutes. The user-level views also show variation in daily steps and sedentary minutes, suggesting that Bellabeat should support different activity needs rather than rely on one universal target.

3. Sleep is a substantial part of the wellness picture.

Average sleep duration is 419.57 minutes, or about 7 hours. The dashboard includes a relationship view between sleep and daily steps, supporting a broader wellness message that connects movement and recovery rather than treating activity as the only outcome.

4. Activity is time-dependent.

Hourly analysis reports 332.3 average steps per hour, 96.95 calories per hour, and 0.21 average intensity. The hourly charts demonstrate that activity varies by time of day, creating an opportunity for Bellabeat to make messaging and prompts more context-aware.

5. Retention should remain a marketing priority.

Although engagement is high among the observed users, the user-level dashboard still shows different recording durations and engagement categories. Bellabeat can use early-life engagement tactics to help users establish consistent habits and preserve long-term usage.

Recommended Marketing Actions

01 — Use time-based activity messaging

Align notifications, content, and campaign messages with the periods when users are most active. Encourage movement at lower-activity times rather than sending identical prompts throughout the day.

02 — Promote small, achievable movement goals

Use step and activity trends to deliver personalized nudges such as short walks, movement breaks, or incremental step goals. This can address differences in activity and sedentary behavior without assuming every user needs the same target.

03 — Position Bellabeat as a holistic wellness companion

Combine activity and sleep content in campaigns. Messaging can frame movement, recovery, and daily routines as connected parts of wellbeing, making Bellabeat more than a step-tracking product.

04 — Build on existing engagement

The high engagement level is an opportunity to reinforce habits with streaks, progress milestones, weekly summaries, and personalized feedback. The goal is to turn existing device usage into a stronger long-term relationship with the Bellabeat ecosystem.

05 — Personalize by engagement stage

Use different messaging for newer/shorter-term users versus long-term users. Early users can receive onboarding and habit-building content, while established users can receive deeper insights, challenges, and milestone-based rewards.

Marketing Priorities

Priority	Bellabeat opportunity	Primary objective
Timing	Context-aware activity prompts	Increase daily activity
Engagement	Streaks, milestones & progress feedback	Strengthen retention
Wellness	Movement + sleep storytelling	Broaden product value
Personalization	Different journeys by engagement stage	Improve relevance

Case-study takeaway: Bellabeat can differentiate by turning passive tracking into personalized wellness guidance — using activity timing, engagement behavior, and sleep context to deliver relevant messages that encourage healthier routines and long-term product use.
